

Project Proposal: Online Flight Ticket Booking System

1. Introduction

The **Online Flight Ticket Booking System** is a web-based application designed to simplify the process of searching, booking, and managing flight tickets. The system provides customers with an easy-to-use interface for booking flights, while also offering administrators and airlines a platform to manage flights, reservations, and payments efficiently.

2. Objectives

- Automate the flight booking process.
- Allow users to search and filter flights based on origin, destination, and date.
- Provide secure and simple booking and payment options.
- Enable administrators to manage flights, schedules, and customer bookings.
- Improve customer experience by providing e-tickets and booking history.

3. Key Features

Customer Features

- Flight search (origin, destination, date, airline).
- User registration/login.
- Online ticket booking.
- View booking history.
- Download/print e-tickets.

Admin Features

- Manage flights (add, update, delete).
- Manage airlines and schedules.
- View and manage customer bookings.
- Generate reports (e.g., popular routes, total bookings).

4. System Modules

1. **Authentication Module:** User & Admin login/registration with role-based access.
2. **Flight Management Module:** Manage flights, airlines, and schedules.
3. **Booking Module:** Customers can reserve and cancel tickets.
4. **Payment Module:** Secure online payment integration.
5. **Reporting Module:** Analytics for administrators.

5. Technology Stack

- **Frontend:** HTML5, CSS3, JavaScript (Bootstrap or React).

- **Backend:** ASP.NET Core MVC (C#).
- **Database:** SQL Server.
- **Other Tools:** Entity Framework Core, Identity for authentication.

6. Benefits

- Saves time for customers and airlines.
- Reduces paperwork and manual errors.
- Provides 24/7 booking access.
- Generates real-time reports for decision-making.

7. Deliverables

- Fully functional web application.
- Database schema and documentation.
- User manual and admin guide.
- Deployment on server/hosting environment.
